

# Welcome to Jekyll!

---

#

**This config file is meant for settings that affect your whole blog, values**

---

**which you are expected to set up once and rarely edit after that. If you find**

---

**yourself editing this file very often, consider using Jekyll's data files**

---

**feature for the data you need to update frequently.**

---

#

**For technical reasons, this file is *NOT* reloaded automatically when you use**

---

**'bundle exec jekyll serve'. If you change this file, please restart the server process.**

---

# Site settings

---

These are used to personalize your new site. If you look in the HTML files,

---

you will see them accessed via `{{ site.title }}`, `{{ site.email }}`, and so on.

---

You can create any custom variable you would like, and they will be accessible

---

in the templates via `{{ site.myvariable }}`.

---

title: Your awesome title

email: [your-email@example.com](mailto:your-email@example.com)

description: >- # this means to ignore newlines until "baseurl:"

Write an awesome description for your new site here. You can edit this line in `_config.yml`. It will appear in your document head meta (for Google search results) and in your feed.xml site description.

baseurl: "" # the subpath of your site, e.g. /blog

url: "" # the base hostname & protocol for your site, e.g. <http://example.com>

github\_username: jakobschumacher

# Build settings

---

markdown: kramdown

remote\_theme: "mmistakes/minimal-mistakes@4.16.6"

plugins:

- jekyll-feed
- jekyll-include-cache

## **Exclude from processing.**

---

**The following items will not be processed, by default. Create a custom list**

---

**to override the default setting.**

---

**exclude:**

---

**- Gemfile**

---

**- Gemfile.lock**

---

**- node\_modules**

---

**- vendor/bundle/**

---

**- vendor/cache/**

---

**- vendor/gems/**

---

**- vendor/ruby/**

---
